

Wonderful Wire: Projects to Make from Wire and Glass

Wire is an endlessly versatile material that lets you bend it, shape it, twist, and plait it. In a range of tones from gleaming copper to muted grey and in different thicknesses, its potential for crafting is huge. Marry it with glass and you have a magical combination - two materials that instantly enhance each other. Wire is linear and flexible, glass is hard and unyielding. Wire-threaded glass beads or frosted sea glass entwined with wire? The creative possibilities are immediately apparent. The book shows how to create beautiful home accents using these two fabulously compatible materials.
